

SOPHISTICATED VEHICLE MANAGEMENT

FULL RANGE OF COMMERCIAL
AND PUBLIC APPLICATIONS

ANPR SOLUTIONS

MAXIMUM BENEFIT

Make vehicle management simple, informed and automated with our sophisticated solutions for traffic management and analytics. Their exceptional quality and reliability are ensured by our **proven vehicle recognition technologies, proprietary software**, and experience in working with a large and varied client base across multiple industries and continents.

TAILORED TO YOUR BUSINESS

Our work starts with **selecting the most suitable hardware** for the specific needs of your business, and pairing it with our **flexible and powerful online software**. Our team can customise or **integrate the solution with other systems or devices**, provide training and ongoing support to your employees. As a result, businesses can rely on our products for vehicle management, automation and analytics 24/7, all year round regardless of changing seasons and weather conditions.

OUR CLIENTS

Wide-ranging integrations

- Access automation (mechanical gate operation)
- Visitor registration systems
- Alerts and messaging on entrance or road signs
- Payment systems
- Conditional workflow

Comprehensive intelligence

- Overstaying, occupancy rates, peak times
- Knowledge of who's in, who's out and time onsite
- Recognition of security, staff members, loyal customers
- Driving behavior patterns for global or individual traffic analysis
- Speed control and analysis
- Dangerous driving and wrong way detection

Easy to start

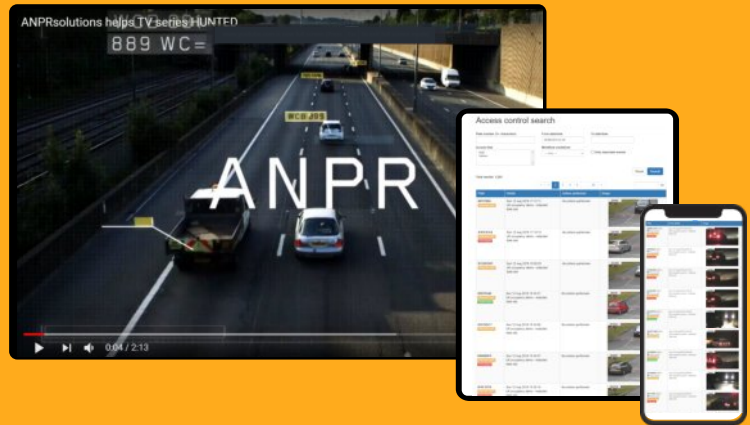

Our advanced technology is packaged into intuitive products, which require minimal efforts from our clients. We provide complete turnkey solution with full support from the initial contact to implementation and operation.

Real-time insights

Our software delivers and analyses data from ANPR cameras in real time. The information can be aggregated from multiple cameras, radars and emission sensors for live viewing and alerting via any internet connected device.

Secure system

All data processed by vehicle recognition software is protected according to local legislation. Data access and transmission are encrypted end-to-end. GDPR compliant.

ANPRsolutions has also provided software for entertainment purposes to the series *Hunted* to enable the tracking of vehicles used by contestants and their key contacts. The use of our ANPR software supported the Hunters in identifying movements and patterns as well as enabling real-time interceptions with mobile detection.

"Thank you so much for all of your work throughout the series, the ANPR worked really well and the hunters were really grateful to have the cameras."

Grace Goddard,
producer, TV show "Hunted" (UK)
